

Patient Care Skills Certificate

Description

Students learn the necessary skills to deliver quality and timely patient care. Students will utilize the necessary medical language to communicate and perform patient care functions. Students will participate in a sixty hour (60) internship in a health care environment so they can practice the theories they learn in the didactic environment.

Program Goals

- ✓ Produce a more motivated, inspired and prepared student.
- ✓ Provide students with entry-level industry recognized healthcare career competencies.
- ✓ Produce students who are prepared for the current healthcare industry.
- ✓ Create new health care programs that mirror needs of the employment sector.

Program Student Learning Outcomes

- ✓ Students will analyze acute changes in the patient's condition and take appropriate interventional action.
- ✓ Students will employ the techniques of body mechanics necessary for safe transport, transfer and positioning of patients.
- ✓ Students will examine changes in a patient's condition that would signal an emergency requiring immediate care.
